

FOR IMMEDIATE RELEASE:

**NCS completes Link 16 / JREAP Training for U.S. Missile Defense Agency**

NCS recently completed a Link 16 and Joint Range Extension Applications Protocol (JREAP) Training Program for the U.S. Missile Defense Agency (MDA) in Huntsville, Alabama. This four-day engineering-level training program was tailored specifically to meet the unique training requirements of the MDA engineering and testing staff, which needed to connect bit-level Link 16 and JREAP information with what the operator see / does in the real world. Our instructor's extensive operational Ballistic Missile Defense (BMD) background enabled us to connect our Link 16 and JREAP experience to the unique requirements of our students.
